Notes:

Without daily brushing your dogs tartar will return at a much faster rate! Your dogs gums will also have a more difficult time staying healthy or returning to optimal health.
 Check out our video on how to brush: <https://www.youtube.com/k9GentleDental>

Things we LOVE

Coconut Oil

Why? It is a natural, single ingredient toothpaste that your doggie will love! It has natural antibacterial, anti-fungal and anti-inflammatory properties so it's great on the teeth and gums. It's a great additive to your dogs daily meals as a source of healthy fat and is also great used topically on dry skin.

Cranberry Extract

Why? The red pigment in cranberries helps to stop bacteria from sticking to the teeth as well as in other areas of the body. It helps to slow the build up of plaque and can help to reverse gum disease! It is also great for heart and urinary tract health as well as a huge source of vitamin c.

Colloidal Silver

Why? Its natures antibiotic and an amazing immune booster. Its great to spray in your dogs mouth to keep bacteria down and help with gum inflammation. It's great to have on hand for any cuts and abrasions as well. It doesn't sting or taste of anything and is safe to ingest.

Loyalty Program
